

Document Preparation Technical Services

Project Summary:

MCH Corporation (MCH) assembled materials for a course taught by the staff of the GSWCC.

Documents in various formats were provided to MCH for assembly into a professionally finished electronically redistributable publication.

A table of contents entry was created for each of the many sections in the course. Each entry was also created as a hyperlink to that section for easier accessibility.

Numerous and various conversions of content provided to MCH were performed in order to assemble all the data into PDF files.

The final deliverable was OCR processed to enable users to search the body content of the finished PDF. It was also optimized to reduce the size for e-mail distribution.

The result: Total client satisfaction.

Client:

Georgia State Water Conservation Commission

Location:

State of Georgia

This work was done under a Firm Fixed Price (FFP) Contract, and delivery of the work product was requested earlier than required by the contract after the contract was issued and endorsed.

Delivery was made on time and on budget without changing the dollar value of the contract via change order.
